

Guide to taking preliminary measurements of *windows and doors*

Taking preliminary measurements is an essential step in simplifying the process of requesting quotes for your windows and doors. It will allow you to obtain a more accurate preliminary estimate of the costs of your project.

To help you, we have designed this guide that explains how to measure your windows and doors.

Approximate measurements are for quotation purposes only. If you choose Fenplast's installation service, a specialist will visit your home to take accurate measurements.

Step 1 **Width**

Measure the inside of the window frame from side to side.

Step 2 **Height**

Measure the inside of the frame from top to bottom.

Note: The same logic applies when measuring a door.

Approximate measurements
